

SENIOR QA ENGINEER

Posted on 31 mars, 2026

Company Name Mentice AB

Location Göteborg

Job Description

At Mentice, we develop simulation solutions that help healthcare professionals train for complex medical procedures. Our products are used globally to support better clinical decisions, improved efficiency, and ultimately better patient outcomes.

*Quality is a fundamental part of how we work — not only in our products, but in our processes, collaboration, and everyday decisions. We are now looking for a **Senior Quality Assurance Engineer** who wants to contribute to meaningful healthcare technology in a structured and collaborative environment.*

What You'll Do

As a Senior Quality Assurance Engineer, you will plan, execute, and continuously improve testing activities across both software and hardware. You will work with products and projects in different phases — from development to production and real-world clinical use.

- The role combines hands-on testing with responsibility for parts of the Quality Management System (QMS), and close collaboration with development teams, product management, and project managers. You will also contribute to strengthening Mentice's quality culture and ways of working.

Key Responsibilities

Testing and quality assurance

- Define and implement HW and SW test strategies, methods, and guidelines for products and projects
- Plan, prioritize, execute, and document test activities to ensure the appropriate quality level across the Mentice product portfolio

Quality Management System (QMS)

- Handle deviations related to processes, products, and systems
- Plan, perform, and complete internal audits independently
- Take ownership of assigned parts of the QMS and related processes

Collaboration and support

- Work closely with QA colleagues, software and hardware developers, product managers, and support teams
- Support project managers with test activities and execution of QA gates
- Act as a role model for a pragmatic and responsible quality mindset within the organization

What You Bring

- Experience in Quality Assurance and testing within software and hardware product development, preferably but not necessarily from the MedTech industry
- A structured and organised way of working, even in agile and evolving environments
- A collaborative mindset and a natural ability to work across functions
- Attention to detail combined with a pragmatic, analytical, and customer-oriented approach
- Strong communication and documentation skills
- Fluency in English, both written and spoken
- Bachelor's (minimum) or Master's (preferred) degree in Electrical, Computer, or Medical Engineering, or equivalent

Why Mentice?

You'll join a global, purpose-driven company where your work directly contributes to better-trained clinicians and improved patient outcomes.

We offer a collaborative, international environment with the opportunity to influence both products and ways of working.

To apply

Apply today and be part of shaping the future of medical training. In this recruitment Mentice is collaborating with Moveup Consulting. For questions regarding the position, please contact Tom Bergqvist at tom.bergqvist@moveup.se.

Please send your application/CV to tom.bergqvist@moveup.se

By submitting your application, you also consent to us storing your personal data, including your CV and cover letter, and you agree that we have the right to share this information with third parties (our client). You can withdraw your consent at any time.

Om företag

For 25 years our solutions and collaborations have helped the advancement of non-invasive and innovative life-changing treatments.

Launched in 1999, Mentice is the leading provider of software and hardware simulation solutions for image guided interventional therapies.

Our solutions are scientifically validated and have been specifically developed for health care providers and the medical device industry. For more than 25 years, we have partnered with all the top manufacturers and their world-renowned key opinion leaders to develop image guided interventional simulation solutions that use real and or virtual medical devices and provide real-life haptic feedback.

In 2020 Mentice acquired Vascular Simulations in order to enhance our product line by offering solutions supporting medical device development from concept to market-rollout.

In 2022, Mentice acquired Ankyras - a CE & FDA cleared clinical decision support application designed to assist Interventional Neuroradiologists in selecting the most suitable flow diverter before interventional treatment of intracranial aneurysms. Ankyras offers an intuitive and precise solution for clinical treatment planning, leading to more accurate prediction than traditional methods.
